

ABSTRACT

A simple device for cleaning CD's that has an outer case that
5 can be made from many materials such as wood, metal, plastic or
rubber. Inside the outer case are upper and lower cleaning pads
made from a number of soft materials suitable for cleaning a CD
with or without a cleaning solution. The width of the CD cleaner
is slightly less than 1/2 the diameter of the CD which allows the
10 person cleaning the CD to avoid touching the data surface of the
CD. Another aspect of the invention is the space between the two
cleaning pads which allows good cleaning action without excessive
friction.
